SUMMARY

AI / Machine Learning Engineer with 4+ years of experience building and deploying production-grade ML and GenAI systems across marketing, finance, and analytics domains. Proven expertise in shipping end-to-end LLM-powered applications, including RAG pipelines, evaluation-driven prompt engineering, and grounded, hallucination-resistant AI systems using LangChain and LangGraph. Strong background in designing scalable ML pipelines, model validation, and real-time inference with measurable business impact—improving forecast accuracy, reducing operational effort, and accelerating decision-making. Experienced in collaborating with platform, data engineering, and business teams to translate ambiguous problems into reliable, safe, and observable AI solutions deployed in cloud and enterprise environments.

SKILLS

- **Machine Learning & AI:** Python (Pandas, NumPy, Scikit-Learn, Statsmodels), Statistical Modeling & Forecasting, Supervised Learning (Linear, Logistic, Ridge, Lasso), Classification (Random Forest, SVM, XGBoost), Unsupervised Learning (K-Means, DBSCAN), Feature Engineering, Model Evaluation (RMSE, MAE, Precision, Recall, AUC), Deep Learning (PyTorch, TensorFlow)
- **Generative AI & LLM Engineering:** LLMs, Hugging Face Transformers, LangChain, LangGraph, LlamaIndex, Retrieval-Augmented Generation (RAG), Prompt Engineering, Embeddings, Vector Databases (FAISS, Chroma), Multi-Agent Systems (CrewAI), LLM Application Development & Orchestration, MCP
- **Cloud Platform & Data Engineering:** Python, SQL, PySpark, Databricks, AWS (EC2, EKS, Lambda, S3, RDS, Bedrock, Sagemaker), Amazon Redshift
- **MLOps & Deployment:** MLflow (Experiment Tracking, Model Registry), Docker (Containerization), FastAPI, Flask & Streamlit (Model Serving & REST API Development), API Design,
- **Software Engineering:** Python Application Development, RESTful API Development, Version Control (Git)
- **Data Analysis & Visualization:** Power BI (DAX, Power Query), Advanced Excel
- **Soft Skills:** Leadership, Stakeholder Management, Translating Business Requirements into Scalable AI/ML Solutions, Communication, Presentation Skills, Problem-Solving, Storytelling, Mentoring

WORK EXPERIENCE

Accenture, Mumbai, India

Machine Learning Engineer, March 2025 – Present

- Designed and deployed **Agentic AI Retrieval-Augmented Generation (RAG)** solutions using LLM embeddings and vector databases (FAISS/Pinecone-style) to automate insurance claim and policy query resolution, reducing manual review effort by **45%**, cutting processing turnaround time by **35%**, and lowering operational support costs for finance operations.
- Incorporated **guardrails and hallucination reduction strategies** (grounded retrieval, structured outputs, validation layers) to ensure reliable and enterprise-ready AI decision-making for an insurance company.
- Designed and deployed an **AI-powered Resume Screening Agent** a **multi-step Agentic workflow (LangChain/LangGraph)** using Retrieval-Augmented Generation (RAG) and LLMs to automate candidate-job matching, improving screening efficiency by 60% and reducing manual recruiter effort.
- Built **FastAPI-based APIs and Streamlit interface** to deliver recruiter-facing dashboards with explainable insights, candidate summaries, and ranking transparency.
- Developed and productionized **customer churn prediction models** (Logistic Regression, Random Forest) achieving **95%+ accuracy**, enabling Marketing to proactively target high-risk customers. Improved retention rate by **18%**, increased campaign ROI by **12–15%**, and supported customer lifetime value (CLV) growth initiatives.
- Applied advanced **prompt engineering and retrieval optimization (top-k tuning, similarity thresholds, hybrid search)** to improve GenAI-driven customer engagement tools, increasing campaign response accuracy by **22%** and improving digital engagement scores by **30%** during pilot rollout.
- Built end-to-end ML pipelines (data ingestion, feature engineering, training, validation, API deployment) for **product and offer classification**, improving targeting precision by **30%**, reducing marketing spend wastage by **20%**, and increasing cross-sell conversion rates by **15–20%**.

Capgemini, Thane, India

Senior Analyst, December 2021 – March 2025

- Developed **sales prediction models** using Python (**XGBoost Regressor, Linear Regression**) to forecast revenue and product demand, improving sales forecast accuracy by **15%** and enabling better sales planning.
- Developed **financial forecasting models** using regression and time-series techniques (ARIMA) to project revenue and expense trends, improving forecast accuracy by 18%.
- **Conducted extensive EDA on financial and sales datasets** and user **behavior analysis** on large datasets (50,000+ records) using **SQL and Python**, driving strategic growth initiatives and sales optimization insights.
- Developed reports and dashboards using **Power BI for the finance team**, resulting in a **35% increase** in operational efficiency.
- **Partnered with Data Engineers and Data Warehouse architects** to optimize data collection and reduce report development time by 25%, collaborated with business stakeholders and BI product managers to identify use cases, reporting requirements, workflows, and processes.

EDUCATION

THAKUR COLLEGE OF ENGINEERING AND TECHNOLOGY , Mumbai Bachelor of Engineering in Electronics	August 2018 - May 2021
GOVERNMENT POLYTECHNIC MUMBAI , Mumbai Diploma in Computer Engineering	August 2015 - April 2018

PROJECT

- GenAI Full-Stack Question Answering System (RAG + Agentic AI)**
- Built a full-stack GenAI application using **LangChain and LangGraph** with a RAG pipeline over financial data using FAISS/Chroma.
 - Developed backend retrieval and reasoning workflows with **Agentic AI patterns** for contextual and multi-step query resolution.
 - Implemented evaluation pipelines and prompt optimization to improve answer accuracy and reduce hallucinations.
- AI Resume Screening & Matching System (RAG + LLM Application)**
- Developed an AI-powered resume screening system using **LLMs and RAG** to match candidate profiles with job descriptions.
 - Built **FastAPI-based backend APIs** and embedding-based ranking (FAISS/Chroma) to score candidates on relevance and fit.
 - Created a **Streamlit interface** with explainable insights, improving recruiter decision-making and ATS-style evaluation.

CERTIFICATION

• Agentic AI (Udacity)	August 2025
• RAG with LangChain and LangGraph	December 2025
• Databricks Certified Data Engineer Associate	October 2025
• Microsoft Certified: Power BI Data Analyst Associate	November 2024
• AZ-900: Microsoft Azure Fundamentals	July 2023
• Machine Learning with Python	August 2023
